

The Summer Space 2017

WEEK 03.
2nd to 8th of July

DAY 01 The day 1 of the third week started with a presentation of what was about to come in terms of activities, tasks and goals. The high school students had a more concrete and specific introduction to what are the main purpose of The Summer Space 2017 and were able to share some thoughts and ideas of their own. After that, the students were divided into **smaller groups and assigned to their own project**, each with a different Master student. Before the end of the day we had a quick brainstorm about “what to improve?” and “how to do it?” as a way to leave everyone with an enthusiastic mood for the days ahead.

DAY 02 started with a **workshop** designed to help everyone **ask important, and fruitful, questions** when in meetings with important partners. Then another workshop followed about which research tools to use when working in a project such as ours. After lunch we had a meeting with **Karin Inglesten** who shared with us some important aspects and insights regarding the project in which she's working in Hammarkullen Lärandets Torg. We took the rest of the day to take a quick look at the Lake as a way to visualize one of the most important parts of the project.

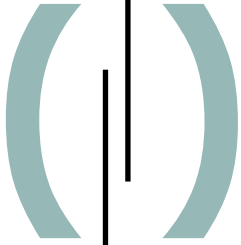

DAY 03 our morning was fully dedicated to a meeting with **Christer Owe**, one of our partners from First to Know, that is currently in charge of a project called **Circle Island** in the Ringön area. It helped all of us understand concepts such as Circular Economy and all its benefits when it comes to improve any given area. After lunch we were visited by **Lina Lo Gillefalk**, a Landscape Architect working for Göteborgs Stad, who helped us do some **area analysis** with special focus on the Lake.

Workshop and Activities

First visit at the lake

The Summer Space 2017

WEEK 03.
2nd to 8th of July

DAY 04 was more about small lectures, activities and workshops - all dedicated to help us cope with the big amount of information gathered in the past weeks. **Aleksandra Borzecka** took us through a small workshop about **problem definition tools** and how it can have a big impact when developing a project. In the second part of the day we had a small activity where each group presented their views on the possible existing challenges and their range of action.

DAY 05 was marked by a meeting with **Thomas Gell, CEO of Brandskyddsforeningen**, an active member of an organization which main focus is the prevention of fire hazards. After which he took time to work with the students in charge of the Safety&Security project group. Then we proceeded with a presentation from each group as a way to brief the fellow members about the progress made this week or, in another words, "**Where are We now?**".

Lectures and Discussions
